HARAVAN

Create private app

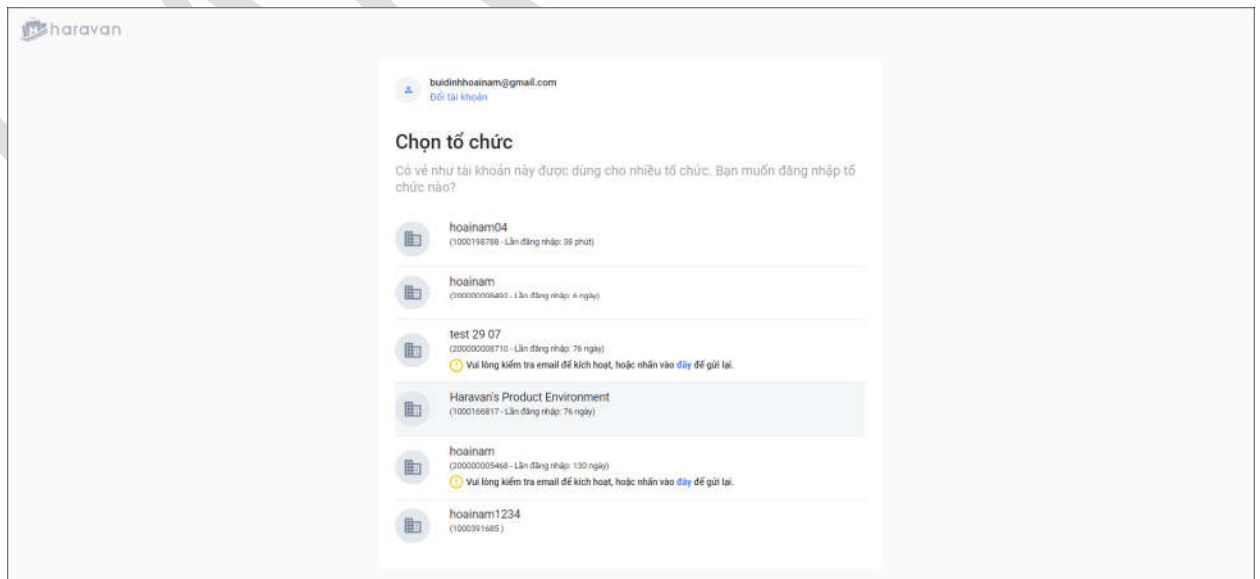

- Private app is an application that can only be used by the creator's account.

1 Step 1: Create app

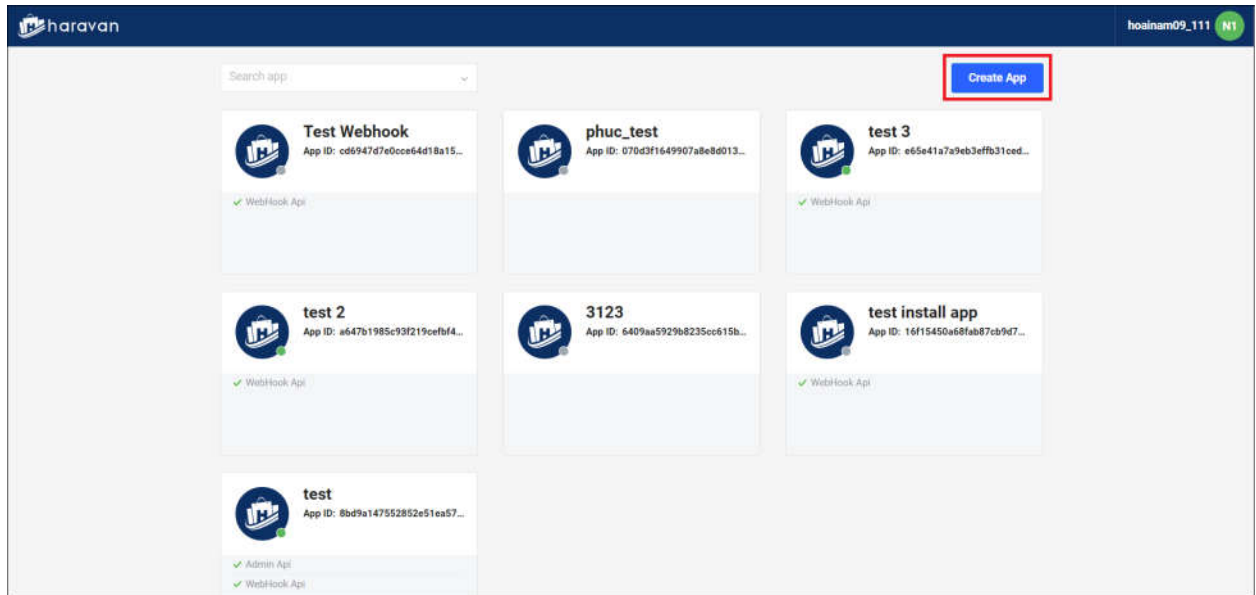

- Follow the link <https://developers.haravan.com/apps> (If you haven't logged in, the system will redirect to sign in <https://accounts.haravan.com>, and at this page you can sign in or sign up).

- After logging in, you need to select a shop if your account has multiple shops

- After sign in/sign up successful, the system will show a list of your applications, click "Create App" button to create a new application.

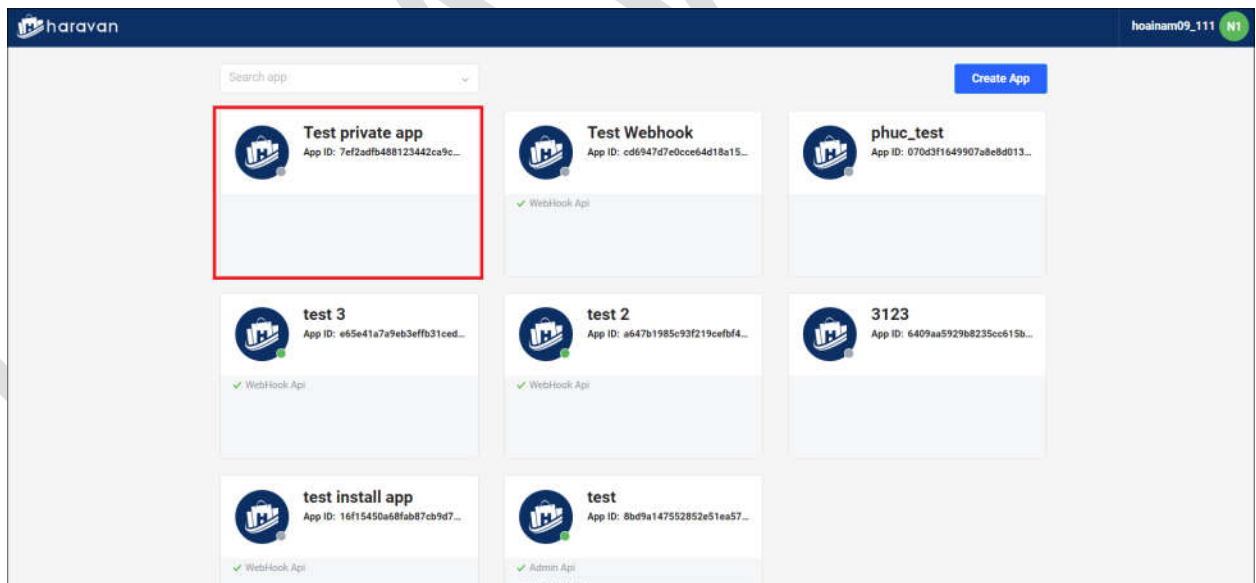

- Screen for create application.

- + Name: application name.
- + Description: application description.
- + Redirect Url: application domain, the system will redirect to this url when starting application.

- Create success.
 - + Some field need to save in config file to use: App Id, App Secret, Redirect Url.

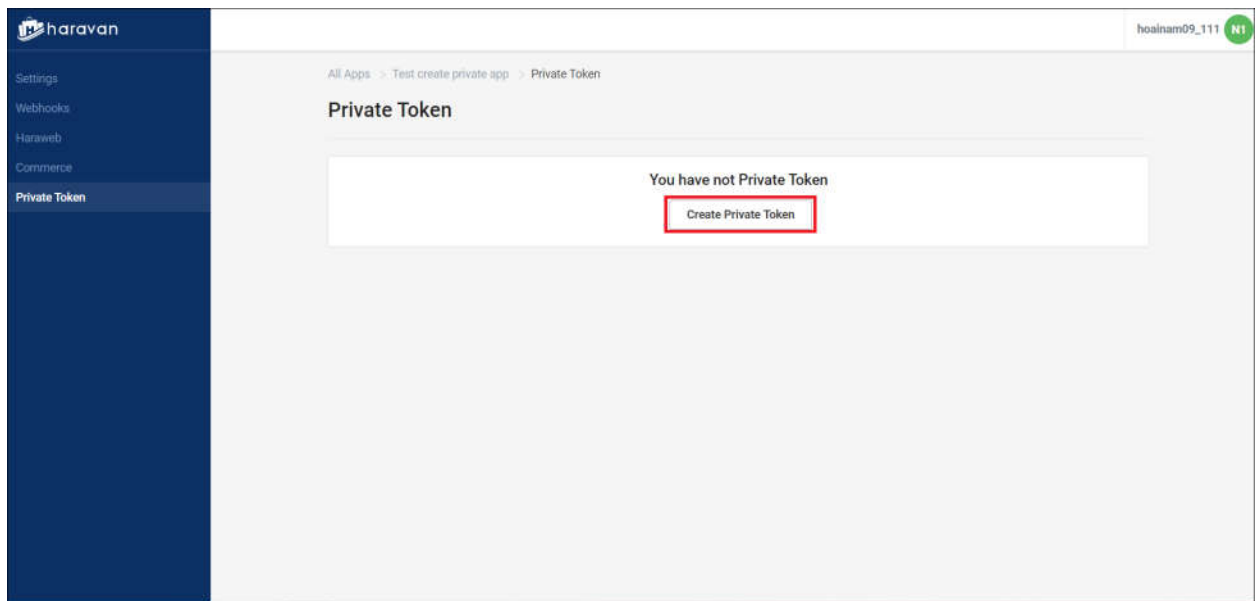

The screenshot shows the 'Settings' page in the Haravan developer portal. On the left is a sidebar with links: Settings, Webhooks, Haraweb, Commerce, and Private Token. The main content area is for creating a new app. It includes fields for 'App ID' (7ef2adfb488123442ca9c1ef1675872c), 'App Secret' (907bf8488e740a6d38bf69b3273fbd204add7c1f3b33313b79), 'Name' (Test private app), and 'Description'. There are two 'Redirect Url' fields: 'http://localhost:3000/promotionbar/install/grandservice' and 'http://localhost:3000/promotionbar/install/login'. Below these are four upload areas: 'Icon App (160 x 160)', 'Banner Login (600 x 600)', 'Icon Login (200 x 60)', and 'Banner App (465 x 150)', each with a placeholder image icon.

- After created, your application will be appeared on list <https://developers.haravan.com/apps>.

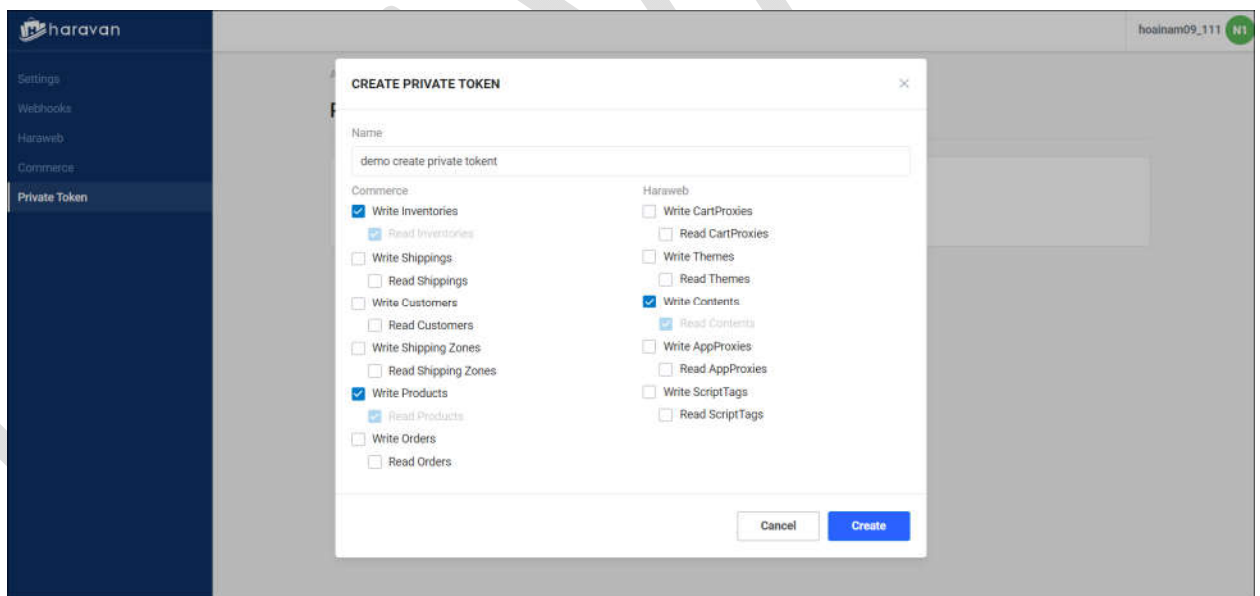

2 Step 2: Private app configuration

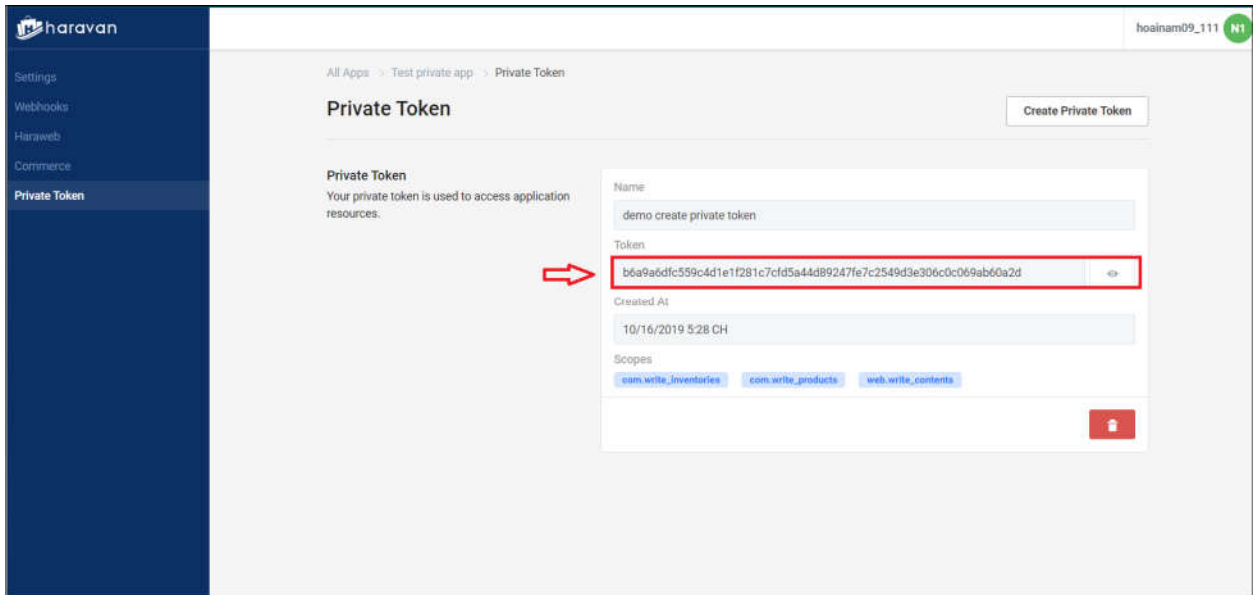

- Go to Private Token, select 'Create Private Token' button to create a private token.

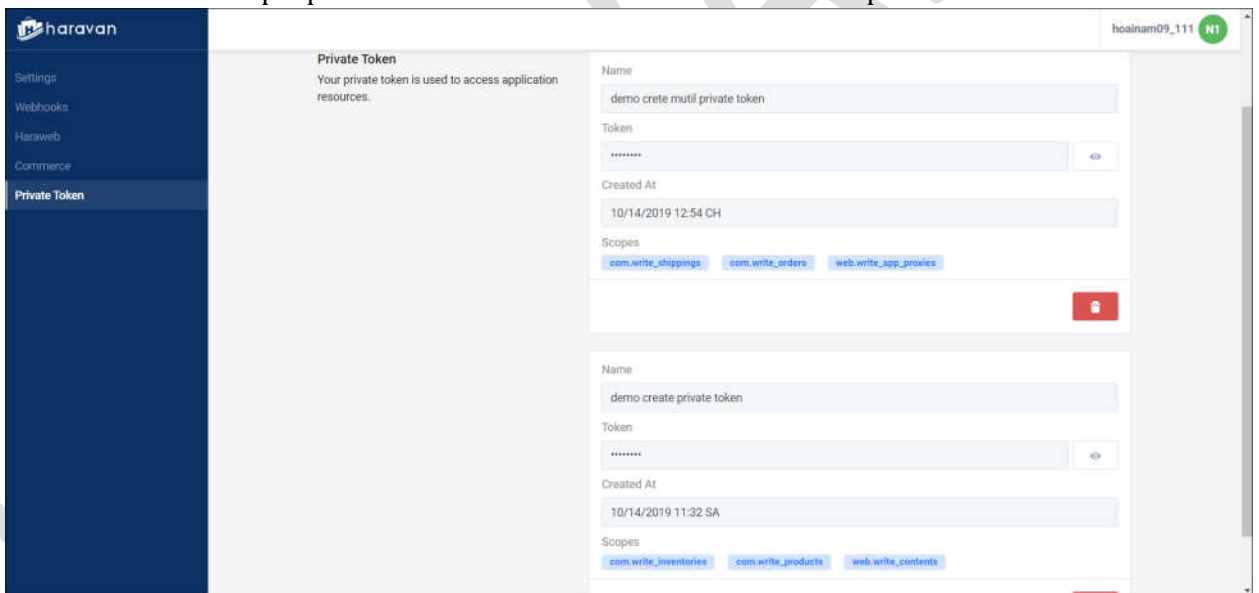

- Enter a name and select the scope for the private token

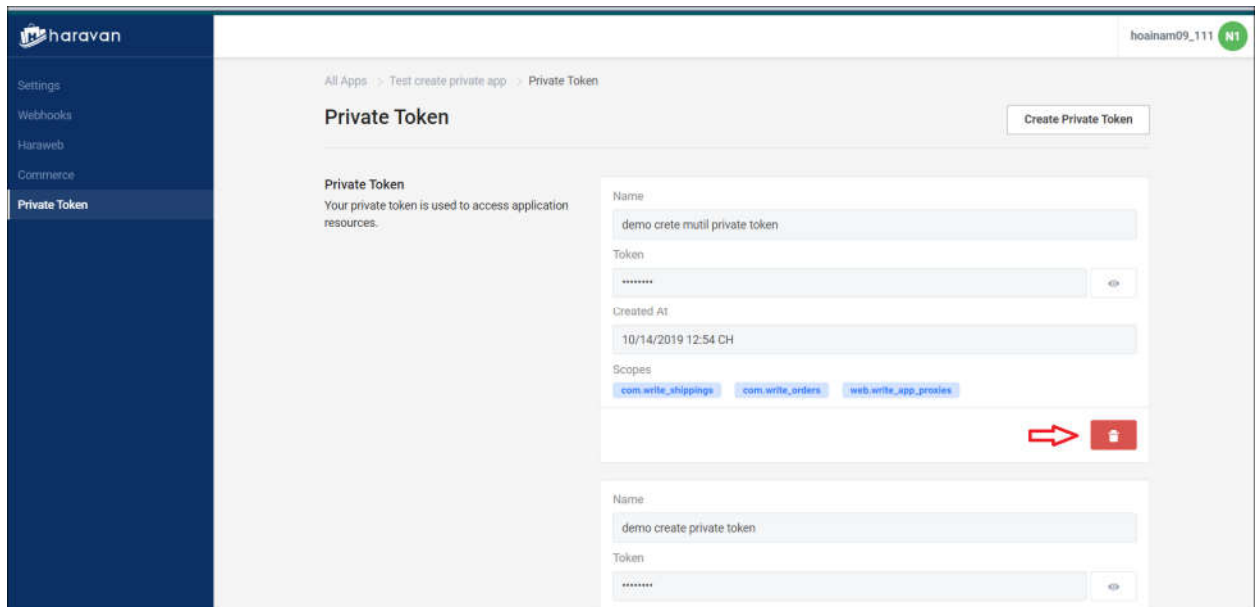

- After creating, you can get the token corresponding to the selected scope

- You can create multiple private tokens with the same or different scopes.

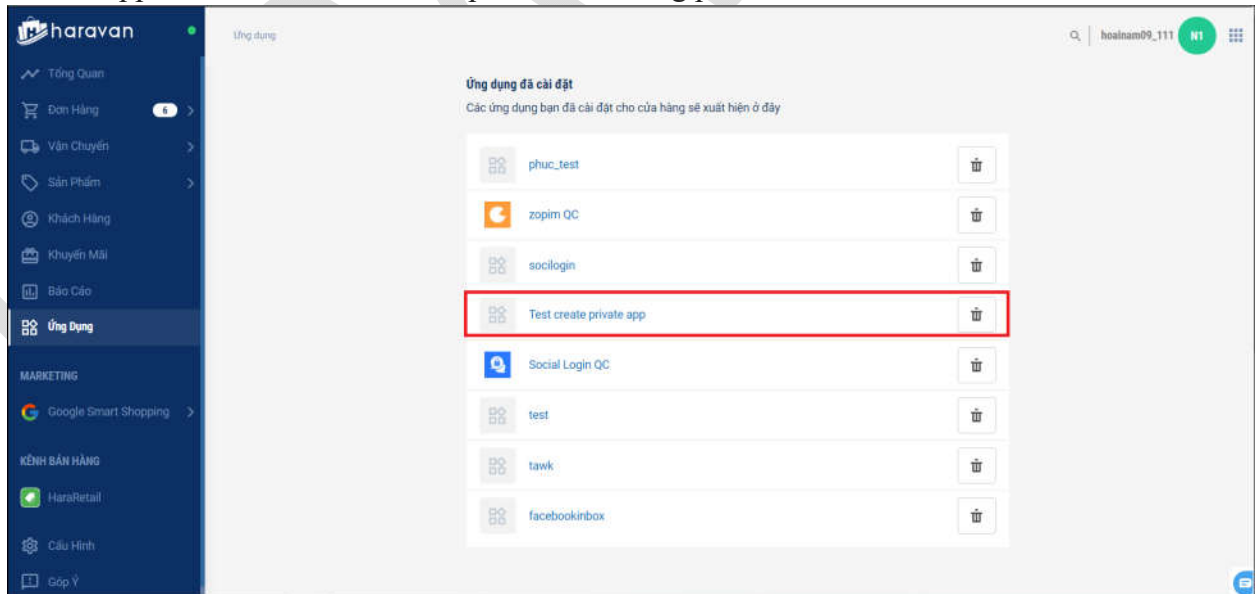

- If you want to delete, click the red button with the trash bin icon to delete.

3 Step 3: Use private app and private token

- After creating private token, private app will be installed into the shop you selected when you logged in ([Step 1](#))
- Private app will use the selected scope when creating private token

- Private token is also used as access_token, this token can be used to query api.
- **Note: Only use api corresponding to the selected scope.**
- Ex: Use private token to query shop information.

- Headers :
- Content-Type : application/json
- Authorization : Bearer + access_token(private token)
